BD and Getz Clinical announce integration partnership

BD and Getz Clinical are excited to announce an integration partnership enabling seamless, automated documentation of infusion data from the BD Alaris™ neXus Infusion Pump platform into Getz Clinical Care (GCC), the Anaesthesia Information Management System (AIMS) from Getz Clinical.

The project will replace the need for manual recording of infusion information currently associated with Total Intravenous Anaesthesia (TIVA), by integrating infusion data from the infusion pump directly into the AIMS in near real time.

This project supports the automatic creation of clinically accurate, detailed data into an electronic medical record, reducing duplicate entry, manual data entry errors and administrative recording which collectively enhances optimal patient care.

About BD

BD technologies combine proven technology with actionable intelligence to simplify medication management. BD has demonstrated this commitment by implementing Infusion Pump interoperability with major Electronic Medical Record (EMR) partners to help deliver medication safety and workflow efficiency through Infusion Management and Auto-Programming at over 750 sites globally.

About Getz Clinical

Getz Clinical is a world leader in perioperative information management systems, with solutions deployed in over 50 hospitals globally. By interfacing with BD TIVA pumps, Getz Clinical fortify their mission statement of “allowing clinicians more time for patient care” further by removing the duplication necessary thus far for recording infusion data.
